

ENVIRONMENTAL POLICY

We are committed to minimising the environmental impact of working operations on our own site, of our products in use by our customers and of our installation and repair services at customers' sites.

We will comply with the relevant legislation governing activities at our own site and those of our customers. We will regularly monitor our environmental performance in reviewing our compliance with the relevant legislation.

All members of our team are aware of the possible environmental impacts which may result from mishaps occurring in undertaking their work and they are fully trained in appropriate actions should such a mishap occur.

In conjunction with our suppliers we regularly review the environmental impact of existing and new materials.

We seek to use energy, water and all materials more efficiently. Wherever possible we will assist in the reuse of our products and the safe disposal of damaged product. We will manage and maintain our site in a responsible manner and we will respond positively to the concerns of our neighbours and our customers on environmental issues.

This policy and the way it is operated will be reviewed every year.

Ian Turner
